

Hospitals can create a monthly dashboard to capture results of questions from their survey (e.g., informed about delays, how well pain was controlled) and other metrics such as falls, call lights, and average turnaround time. This provides the data to track, measure, and report back on trends, opportunities, and the financial impact of hourly rounding in the emergency department. This helps everyone to grasp the important difference it's making in their organizations.

ED	QUALITY/SAFETY			QUALITY OF LIFE FOR STAFF		PATIENT SATISFACTION						PERCENTILE RANK	
	Average Turn Around Time	FALL RATE	CALL LIGHT VOL	Pts/Family approaching nurses station	STEPS (pedometer measurement)	N SIZE	PAIN CONTROLLED	Keep informed about test and treatment	Adequacy of info to family and friends	Informed about delay	Understanding and caring about patient	OVERALL RATING OF CARE	OVERALL PERCENTILE
